Susan:

I just talked with Mickey Edmundson. He indicated that the emergency motion was filed on 6/12/14. This should be dealt with in about 5 days. He indicated that they have made plans for their contractor to mobilize on-site on 6/23/14 to begin the disposal process for VB617. They will also have to sample VB601 (currently have no results) before they dispose. They will also be sampling the waste piles for disposal and then begin the disposal process on the waste piles.

The biggest issue is that they are still working the contract for sale of the property and believe that it will be completed sometime during the week of 6/16 but may go into the week of 6/23. This sale will be contingent upon getting clean closure on the property. If this does go through then their contractor will continue the cleanup beyond what is already planned. The cost for the cleanup is about \$850,000. The sale price is estimated at \$1.4 million.

We should probably know something soon about the direction of things. I will continue to keep in contact with Mickey Edmundson on the status of things at the site.

Thanks

Gary Moore
